

DOCUMENTATION

WordPress Website Documentation

This documentation provides an overview of a WordPress website hosted locally using XAMPP, phpMyAdmin, and MySQL. The website utilizes plugins, the Astra theme, and allows users to post blogs.

Setup

1. **Install XAMPP:** Download and install XAMPP (<https://www.apachefriends.org/index.html>) on your local machine.
2. **Start Apache and MySQL:** Launch XAMPP Control Panel and start both Apache and MySQL modules.
3. **WordPress Installation:**
 - Download WordPress (<https://wordpress.org/download/>).
 - Extract the WordPress zip file into the **htdocs** folder within your XAMPP directory (e.g., **C:\xampp\htdocs**).
 - Rename the extracted folder to your desired site name (e.g., **word1**).
 - Open your web browser and navigate to **http://localhost/phpmyadmin/**.
 - Create a new database (e.g., **word1_db**) for your WordPress site.

- Navigate to **http://localhost/word1/** and follow the WordPress installation wizard, providing database details when prompted.

Features

1. **Theme:** The website uses the Astra theme for its appearance.
2. **Plugins:** Various plugins are integrated into the site for added functionality (list plugins if specific ones are used).
3. **User Blogs:** Users can register and post blogs on the site.

Accessing Video and Images

1. **Video:** To view the video of the website, open the **index.html** file located in the root directory of your WordPress installation (**htdocs/word1/index.html**).
2. **Images:** Images of the website can also be found in the same directory (**htdocs/word1/**).

Feedback

We welcome any feedback or suggestions to improve the website. Feel free to reach out with your thoughts.

Thank you for reviewing and your time!
